BUG-05

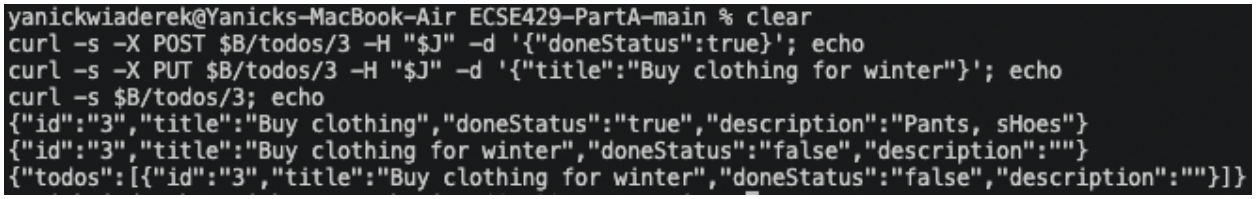

PUT wipes out fields you don't send

Executive Summary
PUT /todos/:id resets description and doneStatus if they're not in the body

Pre-Conditions
API running on localhost:4567.

Steps to Reproduce
1. POST http://localhost:4567/todos with {"title": "Buy clothing", "description": "Pants, shoes", "doneStatus": true}. Note the id it returns (<id>).
2. PUT http://localhost:4567/todos/<id> with {"title": "Buy clothing for winter"} (Content-Type: application/json).
3. GET http://localhost:4567/todos/<id> and compare with step 1.

Bug Description
Expected: The docs describe PUT the same way as POST ("amend a specific instances of todo using a id with a body containing the fields to amend"), so I expected only the title to change.
Actual: Got 200 and the title changed, but doneStatus went back to false and the description became an empty string. GET confirms it was saved like that. PUT also refuses a body without a title (400 "title : field is mandatory"), so it's really doing a full replace, not an amend.

Reproduced after the session (Oct 18, ~8:30 PM EDT; any Date header shown is in GMT)
In the screenshot, the todo used is id 3 (description and doneStatus were set earlier with POST)

Frequency
Every time. Same thing with XML.

Potential Impact
High. If someone uses PUT to fix a typo in a title, they lose the description and the done status without any warning.

Notes
POST /todos/:id works the way the docs say (only changes what you send). Either PUT should behave like POST or the docs should say PUT replaces the whole todo. Found at 6:56 PM in session 1 (todo 3). Unit tests: BUG-05 SPEC EXPECTED (fails) and BUG-05 OBSERVED (passes).
