BUG-07

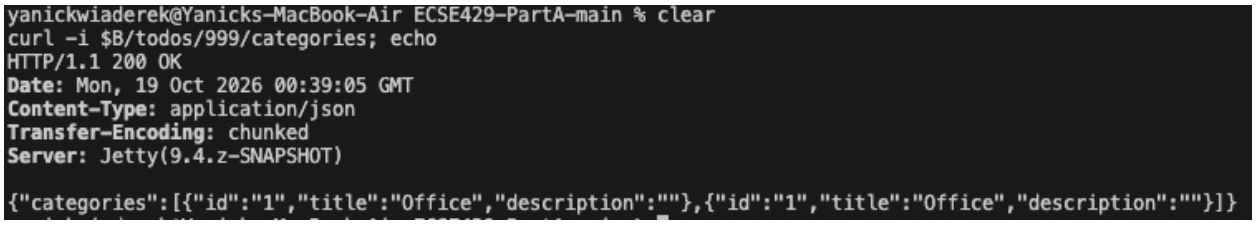

Categories of a todo that doesn't exist come back with 200

Executive Summary
GET /todos/999/categories returns 200 and unrelated categories, not 404

Pre-Conditions
API running on localhost:4567 with the default data. Category 1 "Office" is linked to todo 1. Todo 999 doesn't exist.

Steps to Reproduce
1. GET http://localhost:4567/todos/999 and check it gives 404.
2. GET http://localhost:4567/todos/999/categories (Accept: application/json).
3. HEAD http://localhost:4567/todos/999/categories.

Bug Description
Expected: 404 saying todo 999 doesn't exist.
Actual: 200 with a list of categories. Like BUG-06 it seems to return one entry per todo-category link in the system. With the default data that's "Office" once, but in my session it showed up twice because I had linked a second todo to it. HEAD also gives 200.

Reproduced after the session (Oct 18, ~8:30 PM EDT; any Date header shown is in GMT)
In the screenshot, Office shows up twice because todo 5 was still linked to it from BUG-08

Frequency
Reproduced consistently for the nonexistent IDs tested

Potential Impact
Medium to high. Same problem as BUG-06, a bad id looks valid and returns data from other todos.

Notes
Probably the same root cause as BUG-06 (the endpoint never checks the todo exists), but I logged it separately since it's a different endpoint. Found at 7:01 PM in session 1. Unit tests: BUG-07 SPEC EXPECTED (fails) and BUG-07 OBSERVED (passes).
