BUG-08

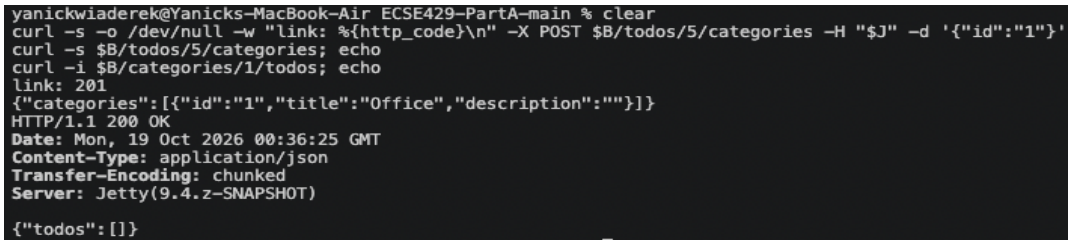

Todo-category links are not shared between the two sides

Executive Summary
Linking a todo to a category is not reflected in /categories/:id/todos

Pre-Conditions
API running on localhost:4567 with the default data (todo 1 is already in category 1).

Steps to Reproduce
1. POST http://localhost:4567/todos with {"title": "Buy gloves"}. Note the id it returns (<id>).
2. POST http://localhost:4567/todos/<id>/categories with {"id": "1"}. Gives 201.
3. GET http://localhost:4567/todos/<id>/categories. Category 1 is there.
4. GET http://localhost:4567/categories/1/todos.

Bug Description
Expected: Category 1's todos should include the new todo, and todo 1 too since it's linked by default.
Actual: 200 with an empty list {"todos": []}. Neither todo shows up, even though both of them list category 1.

Reproduced after the session (Oct 18, ~8:30 PM EDT; any Date header shown is in GMT)
In the screenshot, the todo used is id 5.

Frequency
Every time.

Potential Impact
Medium. The two sides don't agree, so anything that lists the todos in a category (like "show me everything in Office") would show nothing.

Notes
It also happens the other way: a link made with POST /categories/:id/todos shows up on the category but not in /todos/:id/categories. Todo-project links do work both ways, so categories are the odd one out. Found at 7:01 PM in session 1 (with todo 12). Unit tests: BUG-08 SPEC EXPECTED (fails) and BUG-08 OBSERVED (passes).
