BUG-09

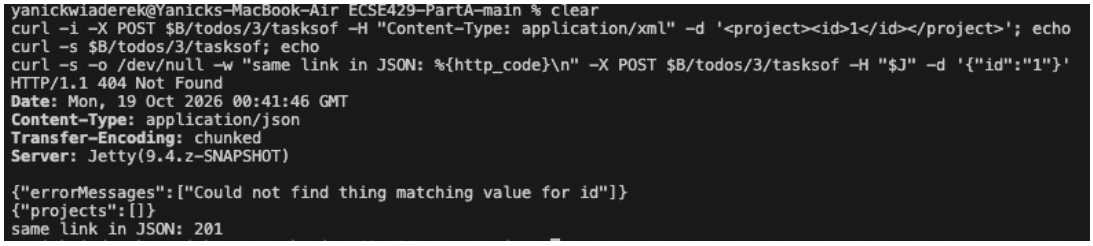

Can't create todo relationships with XML

Executive Summary
POST tasksof/categories with an XML body returns 404; same JSON works

Pre-Conditions
API running on localhost:4567 with the default data (project 1 and category 1 exist).

Steps to Reproduce
1. POST http://localhost:4567/todos with {"title": "Buy gloves"}. Note the id it returns (<id>).
2. POST http://localhost:4567/todos/<id>/tasksof with Content-Type: application/xml and body <project><id>1</id></project>.
3. GET http://localhost:4567/todos/<id>/tasksof to see if the link was made.
4. POST http://localhost:4567/todos/<id>/categories with Content-Type: application/xml and body <category><id>1</id></category>.
5. Try steps 2 and 4 in JSON with {"id": "1"} to compare.

Bug Description
Expected: The docs say you can send XML if you set Content-Type to application/xml, so these should work the same as JSON and give 201.
Actual: Both XML requests give 404 "Could not find thing matching value for id" and nothing is linked (step 3 returns an empty list). JSON works (201).

Reproduced after the session (Oct 18, ~8:30 PM EDT; any Date header shown is in GMT)
In the screenshot, the todo used is id 3.

Frequency
Every time, for both tasksof and categories.

Potential Impact
Medium. XML clients can't create todo-project or todo-category relationships using the tested endpoints, even though the respective JSON requests function.

Notes
Other XML requests (creating and updating todos) work fine, and this one fails cleanly with nothing half-saved. Found at 7:06 PM (todo 3), confirmed for categories at 7:12 PM (todo 13). Unit tests: BUG-09 SPEC EXPECTED (fails) and BUG-09 OBSERVED (passes).
